To Whom it may concern:

Subject: PHD – PFAS Statement

At PHD, we are committed to providing products that meet applicable safety, quality, and regulatory requirements while continuously evaluating opportunities to reduce environmental impact.

Per- and polyfluoroalkyl substances (PFAS) are a broad class of chemicals used in a variety of industrial and consumer applications because of their unique performance characteristics. We recognize the growing interest from customers, regulators, and other stakeholders regarding the use of PFAS.

Based on information currently available from our suppliers, we know that certain materials used in our manufacturing processes contain PFAS. These materials include, but are not limited to, certain lubricants, sealing and bearing materials, and surface coatings.

We are committed to improving our understanding of the materials in our supply chain and monitoring evolving regulatory requirements related to PFAS. As additional supplier information becomes available, we will continue to update our records and, where appropriate, evaluate alternative materials that meet our performance, quality, and regulatory requirements.

We are committed to providing accurate information to our customers and will share updated PFAS information as it becomes available. If you require information on a specific product please contact us.

Gary Murphy
Senior Vice President of Global Sales
